

visor2™

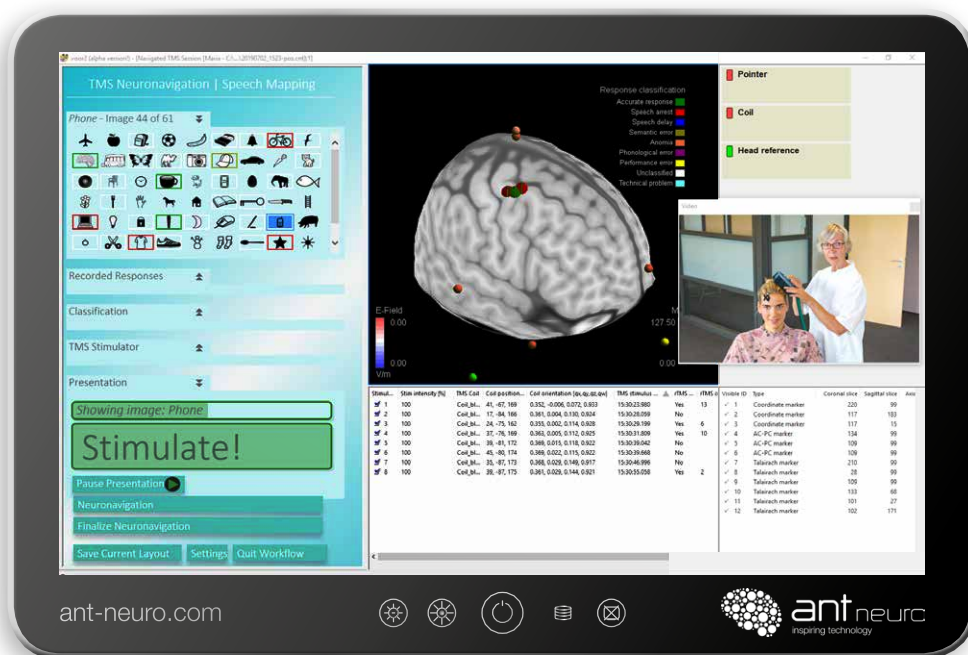

Neurolinguistics

The visor2 system is not available for sale in all countries, please refer to the associated visor2 specification documents or contact your local representative for details. <https://www.ant-neuro.com/contact-us>

Neurolinguistics

In addition to mapping language-eloquent cortical areas pre-surgically, navigated Transcranial Magnetic Stimulation (nTMS) is a powerful tool which allows researchers to explore causal relations between brain regions and language functions in a uniquely informative way. TMS has been extensively used in studies investigating language at both cognitive and neural levels. ANT Neuro navigation technology, visor2™ can guide you through every step of a TMS session, allowing you to accurately localize and stimulate crucial language brain areas.
